

Flow Monitor Flow Indicator

DWG

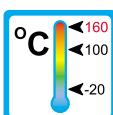

Operation

The flow monitors and indicators type DWG operate with the float measuring principle

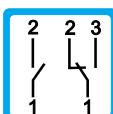

Application

The flow monitors and indicators type DWG are used for indicating and monitoring volumeflow of liquid media.

Areas of application:

- Coolingsystems and cooling circuits
- Mechanical Engineering e.g. Weldingmachinery and Laserplants
- Medicine technology
- Pharma industry
- Chemical industry
- Research and development

Features

The DWG series proves itself through reliable function and easy handling. Further characteristics of this sturdy type are:

- high reliability
- high switch accuracy
- wide switch range
- infinitely variable switchpoint adjustment through user
- EX-version to ATEX available
- Scales are burned into the sightglass
- Threaded connection

Installation hints

The instrument must be installed vertically in the system. The flow direction is from bottom to top.

The flow monitor must not be used as a supporting part in a pipeconstruction!

The medium must not contain any solid particles! We recommend the installation of strainer type SFD or SFM.

External magnetic fields influence the switch contact. Keep adequate distance to those magnetic fields (e.g. electromotors)!

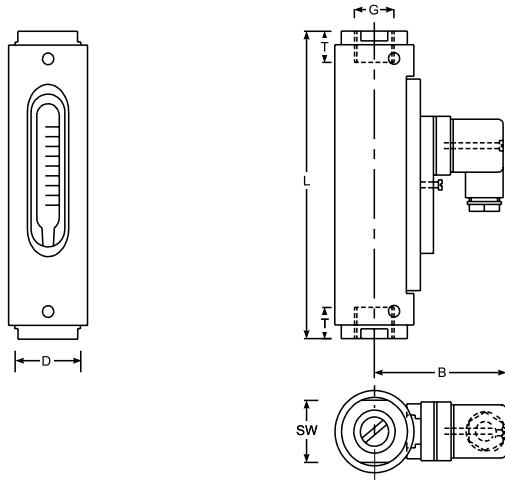

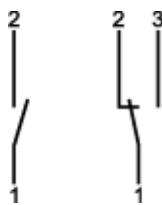

The operating instruction for DWG must be observed under any circumstances!
