

# Flow Monitor

## DKME

### Operation

The flow monitors type DKME operate with the float measuring principle

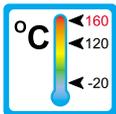

### Application

The flow monitor type DKME are used for monitoring the flow of oils and other viscous media.

They are designed in such a way, that also with changes of viscosity, a reliable limit value monitoring is possible.

Here the kinematic viscosity may vary between 30 cSt and 600 cSt.

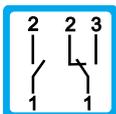

The instruments are predominantly used in lubricant systems.

Areas of application are:

– Central lubrication

– Circulation lubrication

– Transformers

### Features

The DKME series proves itself through reliable function and easy handling. Further characteristics of this sturdy type are:

- universal mounting
- high reliability
- viscosity compensated
- high switch accuracy
- wide switch range
- infinitely variable switchpoint adjustment through user
- EX-version to ATEX available
- high pressure resistance

### Installation hints

The installation of the flow monitor can be done in any way in the system. The flow direction must be observed.

The flow monitor must not be used as a supporting part in a pipeconstruction!

The medium must not contain any solid particles! We recommend the installation of strainers type SFD or SFM.

External magnetic fields influence the switch contact. Keep adequate distance to those magnetic fields (e.g. electromotors)!

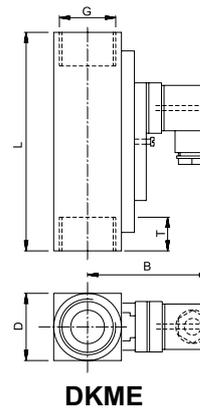

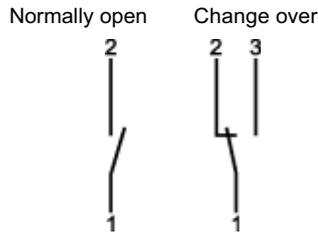

The operating instruction for DKME must be observed under any circumstances!
